

Model AS Mechanical Set Liner Packer

The Model AS Liner Packer Top Debris Seal Packer (DSP) is an upper seal assembly that can be run with or without slips. The Model AS DSP is an affordable, quality option for common heavy-oil Cold Heavy Oil Production with Sand (CHOPS) and horizontal wells.

The simple setting procedures require a compression set, which can be obtained with the AP running tool. It is designed to be rugged and durable in order to get into position. Its bonded element and fully adjustable shear values and shear points make this system very reliable. There is no wasted time once on depth in order for setting, as it is a simple rotation and compression. No need to pump or circulate.

Features and Benefits

- One piece mandrel design
- Extremely fast setting procedure—no need for ball drop or displacement
- Bonded element
- Economical
- Features simple running procedures
- Thermal applicable
- Compression set
- Optional hold-down slips
- Multiple sizes
